To Whom It May Concern,

Mr. Durst was evaluated at All Back and Joint Care Medical Group on October 15, 2010. He presented with constant moderate neck pain radiating into the thoracic spine resulting from an injury that occurred October 9, 2010 while onstage in Warsaw, Poland. He was evaluated by a therapist on site and was directed to follow up with a physician when he returned home. Due to the persistent symptoms he is unable to continue his tour.

Orthopedic evaluation (October 15, 2010):

Mr. Durst had a forward antalgic head position, positive cervical compression test with absent brachial radial reflex on right. He has decreased range of motion and constant moderate pain increasing to severe with cervical extension left lateral rotation and left lateral bending.

Due to the severity of his symptoms a cervical MRI was ordered. Findings enclosed.

Disability status:

Total temporary disability from October 15, 2010-November 16, 2010.

Diagnosis:

Rule out cervical disc derangement. Chronic cervical sprain and cervical brachial neuritis.

Please contact me if you have any further questions.

Sincerely,
Michael D. Sheps, D.C.
